

Lecture Notes of Signals and Mechatronic Systems

Duarte Valério

September 11, 2019

Contents

1	The name of the game	1
2	The Laplace transform	3
2.1	Definition	3
2.2	Finding Laplace transforms	4
2.3	Finding inverse Laplace transforms	6
2.4	Important properties: derivatives and integrals	12
2.5	What do we need this for?	14
2.6	More important properties: initial and final values, convolution	16
2.7	The Fourier transform	19
	Glossary	21
	Exercises	22
3	Examples of mechatronic systems and signals	23
3.1	Systems	23
3.2	Signals	29
3.3	Models	36
	Glossary	39
	Exercises	40
4	Modelling mechanical systems	45
4.1	Modelling the translation movement	46
4.2	Simulating transfer functions in MATLAB	51
4.3	Modelling the rotational movement	53
4.4	Energy, effort and flow	56
4.5	Other components	58
	Glossary	61
	Exercises	62
5	Modelling electrical systems	67
5.1	Passive components	67
5.2	Energy, effort and flow	70
5.3	The operational amplifier (OpAmp), an active component	74
5.4	Other components	81
	Glossary	82
	Exercises	83

6	Modelling fluidic systems	87
6.1	Energy, effort and flow	87
6.2	Basic components of a fluidic system	87
6.3	Other components	88
	Glossary	88
	Exercises	88
7	Modelling thermal systems	89
	Glossary	89
	Exercises	90
8	Modelling interconnected and nonlinear systems	91
	Glossary	91
	Exercises	92
9	Transfer functions and block diagrams	93
9.1	More on transfer functions	93
9.2	Block diagrams	93
9.3	Control in open-loop and in closed-loop	93
	Glossary	93
	Exercises	93
10	Time and frequency responses	95
10.1	Time responses: steps and impulses as inputs	95
10.2	Steady-state response and transient response	95
10.3	Time responses: periodic inputs	95
10.4	Frequency responses	95
10.5	The Bode diagram	95
10.6	Time and frequency responses of a first-order system without zeros	95
10.7	Time and frequency responses of a second-order system without zeros	95
10.8	Responses of systems with more zeros and poles: effects of poles and zeros	95
10.9	The Routh-Hurwitz criterion	96
10.10	Responses of systems with more zeros and poles: dominant poles and zeros	96
	Glossary	96
	Exercises	96
11	Measuring chains and control loops	97
	Glossary	97
	Exercises	97
12	Sensors	99
13	Actuators	101
14	What next?	103
