

Tiago Costa received the B.Sc. and M.Sc. degrees in electrical engineering and the PhD in Electrical and Computer Engineering, all from Instituto Superior Técnico (IST) - University of Lisbon, Portugal, in 2006, 2008, and 2014, respectively. His PhD thesis was focused on the developing of CMOS integrated circuits for magnetoresistive sensors interface for biomolecular recognition and neuronal recording. Since 2015, he is a Postdoctoral Research Associate at the Bioelectronics Systems Lab at Columbia University, New York, USA. His current broad research interests are on the design of low-noise and low-power

CMOS analog and mixed signal circuits and integration of CMOS chips with different technologies. He is currently working on ultrasound transceivers for neuromodulation applications.
